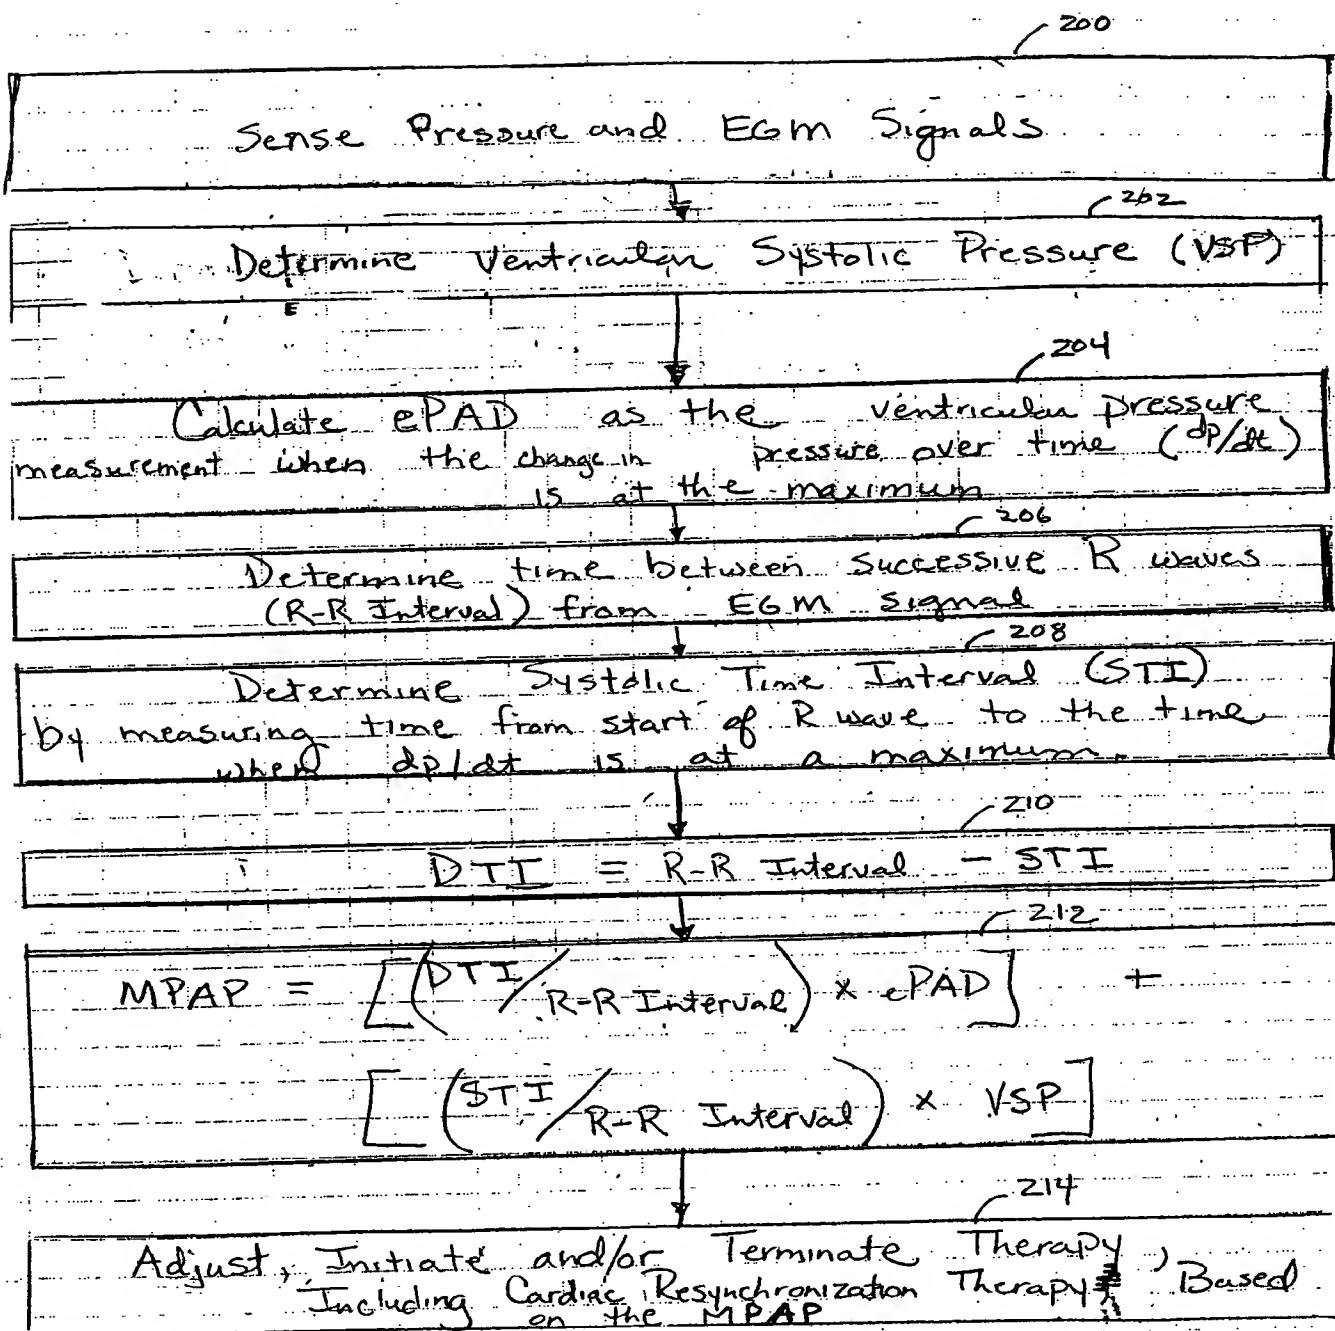

Figure 4

A schematic diagram of a medical device, likely a catheter. It features a handle (270) at the top left, connected to a long, flexible shaft (252). The shaft is shown in a coiled configuration, with a section (254) passing through a circular opening (256). A specific point on the shaft is labeled 260, and the distal end is labeled 250. A curved line (266) is also shown near the coiled section.
